

I understand that the NAB has a petition 04-160 before you that would restrict satellite radio from providing weather and traffic information. This infuriates me. I spend considerable time in my car, and the ability to get this information on my XM car radio would be invaluable to me. Why should I fish around looking for a local station when I could get it instantly on XM or Sirius? Why is it that when a better idea comes along, there is always a group that want to stifle it? I ask that you allow satellite broadcasters to provide this service, as a public service, and a contribution to safer driving.  
Thank you

Perry van Wagenen
